

GeoInfo™ - Standard

ACCESS GEODATA TOPO 250K (v3) CLIPPED YOUR PROJECT REGION
IN THE PROJECTION OF YOUR CHOICE (AVAILABLE IN .SHP AND .TAB FORMATS)

Geoimage now offers the option to purchase our latest product **GeoInfo - Standard** which supplies the GEODATA TOPO 250K (Series 3 - June 2006) dataset clipped to your project region, in the format and projection of your choice.

Purchasing GeoInfo - Standard will assist in identifying up to 92 topographic features that fall within a 20km buffer around your project area. The GEODATA 250K Series 3 dataset (originally sourced from Geoscience Australia) covers the whole of Australia and contains 92 feature classes as listed below. The GeoInfo - Standard product is ideal as a set of reference GIS datasets for use when looking at project areas on a regional scale down to 1:70,000.

Alternatively, if you require a higher level of accuracy for your GIS datasets, then please look at our **GeoInfo - Advanced** product where our team at Geoimage can classify your project area features from your imagery to localised scales of accuracy dependent on the resolution of your imagery.

CARTOGRAPHY

- Annotations
- Cartographic Lines
- Cartographic Points
- Graticule Annotations
- Graticules
- Grid Annotations
- Grids

ELEVATION

- Bench Marks
- Contours
- Horizontal Control Points
- Spot Elevations
